

Aggelos Frantzeskakis

Software Developer — Web & AI Systems (self-taught)

Rethymno, Crete, Greece · aggelosf2016@gmail.com · portfolio.axonos.dev · axonos.dev · github.com/Frezzaroukos

SUMMARY

Self-taught developer, 19, from Rethymno. For the last two years I have been building **AXON** — a local-first platform of web and AI tools for small businesses — solo and end-to-end: backend, frontend, payments, deployment, and the Linux infrastructure it runs on. I ship software that runs in production, not tutorials. Currently completing mandatory military service (until October 2026), building and operating everything remotely throughout. **Available for full-time work from November 2026.**

SELECTED PROJECTS

AXON Booking — production booking platform · live: axonos.dev/book/block-barbers

- Complete booking product for local service businesses: multi-step booking flow, per-staff parallel availability, customer profiles without accounts, waitlist with auto-notify, email reminders on systemd timers.
- PIN-gated owner dashboard with revenue analytics and a staff mobile view; per-tenant theming (each client gets a distinct visual family).
- Python backend, Next.js/TypeScript frontend; deployed behind Cloudflare tunnels with per-client subdomains.

AXON Platform — AI operations infrastructure · private repo, case study on request

- LLM router across 17 providers (LiteLLM) with intent classification and semantic caching; local model serving with Ollama on AMD ROCm.
- Stripe subscriptions and deposits, Telegram/Discord bots, and a Next.js operations cockpit; multi-agent AI coordination across CLI sessions.
- Local-first as a design constraint: clients such as lawyers and agronomists cannot send their data to cloud APIs.

Smaller shipped work

- **Anabasis** — weighted-calisthenics progression tracker; offline-first PWA, TypeScript strict, bilingual (live: anabasis.axonos.dev).
- **Anafora** — rough notes to formal documents using a local model (Ollama/Krikri), no server by default.
- **Portfolio site** — React/Vite, bilingual EN/EL, deployed and self-hosted (portfolio.axonos.dev).

SKILLS

Languages	TypeScript / JavaScript, Python; Go and Rust as learning languages
Web	React, Next.js, Vite, Tailwind, REST APIs, PWA / offline-first patterns
AI / LLM	LLM orchestration (LiteLLM), Ollama on AMD ROCm, RAG, multi-provider routing, prompt/agent workflows
Infrastructure	Linux (Arch), systemd services & timers, Docker, Cloudflare tunnels/DNS, self-hosting, restic backups
Other	Git/GitHub, Stripe integration, Telegram/Discord bots, monitoring & ops of my own production services

EXPERIENCE & STATUS

Independent developer — AXON · 2024 – present

Designed, built, and operate the entire AXON stack solo; delivered a live booking product used for client demos and proposals to local businesses in Crete. No professional team experience yet — that is exactly what I am looking for.

Military service (Greece) · 2026 – October 2026

Mandatory service; maintained and developed all production systems remotely during this period.

LANGUAGES

Greek (native) · English (fluent)
