

Aggelos Frantzeskakis

Independent Digital Craft / Software & Product Builder

Building useful digital experiences around offline-first products, local AI, resilient interfaces, and thoughtful web experiences.

PROFILE

I am developing a practice at the intersection of software engineering, product thinking, local intelligence, and visual craft. My current work explores systems that respect user attention, keep data close to the device, and make complex ideas easier to move through.

SELECTED PROJECTS

AXON OSS

Open-source local-first AI Operating System with a multi-provider AI router, RAG, cost optimization, and a 25-panel cockpit. Private repository; concept and implementation direction reflected in the portfolio.

Anabasis

Offline-first weighted calisthenics and skill-progression PWA with strict TypeScript, bilingual experience, IndexedDB, React, and a live deployment at anabasis.axonos.dev.

Thermidor

AI-augmented calorie tracker exploring offline-first PWA patterns, modular opt-in features, multi-provider AI chat, IndexedDB, React, TypeScript, and Supabase.

Anafora

Local-AI workflow that turns rough notes into formal documents using Ollama/Krikri without sending data to a remote server.

CAPABILITIES

Offline-first product thinking | Local AI workflows | TypeScript and React | PWA architecture | IndexedDB
| Interface systems | Product storytelling | Browser automation and orchestration

TECHNICAL DIRECTION

Current public GitHub evidence includes four public repositories and an active TypeScript-centered practice. The portfolio intentionally treats private repositories as source boundaries rather than presenting unverified details as public facts.
